

CSA-Z462 ELECTRICAL SAFETY IN THE WORKPLACE- AWARENESS TRAINING

If you completely understood electrical maintenance hazards, would you risk it?

The need for analyzing electrical hazards in the workplace has been recognized by a small segment of the industry for many years. For the most part however, the electrical industry, at least at the user level, has largely ignored the subject, essentially reacting to catastrophic accidents rather than proactively trying to predict and prevent them. Recent changes in consensus standards, along with a better general understanding of the seriousness of electrical hazards have resulted in a renewal of interest in the subject. We can provide an overview of the types of electrical hazards, along with a discussion of the relevant standards and regulations pertaining to the subject and leading to compliance for your facilities.

Train and qualify employees in CSA-Z462 Compliance Qualified Person (Worker)

One who has skills and knowledge related to the construction and operation of electrical equipment and installations and has received safety training to identify the hazards and reduce the associated risk.

4.1.3 Responsibility - The employer has the following responsibilities: a) establish, document, and implement the safety-related work practices and procedures required by this Standard; and b) provide workers with training in the employer's safety-related work practices and procedures.
